

Marblehead (Essex)

Marblehead is a town in Essex County with 4,522 residents aged 65 and older. Compared to state average rates, older residents have lower rates of tooth loss, Alzheimer's disease or related dementias, anemia, chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, heart attack, hypertension, ischemic heart disease, liver disease, peripheral vascular disease, pressure ulcer, stroke, tobacco use disorders, anxiety disorder, and schizophrenia. However, they report higher rates of falls, cataract, fibromyalgia/chronic pain/fatigue, and osteoarthritis/rheumatoid arthritis. They are more likely to take the health promotion steps of meeting the CDC guidelines for aerobic activity, getting screened for high cholesterol, and having an annual dental exam. Community resources to support healthy aging include a COA, an Alzheimer's caregiver support group, a public library, six primary care providers, and two skilled nursing facilities.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		20,350	6,984,205
Population 60 years or older as % of total population		30.6%	23.8%
Total population 60 years and older		6,222	1,661,076
Population 65 years or older as % of total population		22.2%	17.1%
Total population 65 years and older		4,522	1,195,589
% 65-74 years		56.5%	58.4%
% 75-84 years		29.1%	28.1%
% 85 years or older		14.4%	13.4%
% 65+ population who are female		54.2%	56.2%
% 85+ population who are female		62.9%	66.6%
Race and ethnicity of the population 65+

% 65+ hospice users		2.9%	2.8%
% 65+ hospice users as % of decedents		50.2%	44.0%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Massachusetts Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.
