

Tewksbury (Middlesex)

Tewksbury is a town in Middlesex County with 6,038 residents aged 65 and older. Compared to state average rates, older residents fare better on some healthy aging indicators with lower rates of cataract, substance use disorder, and PTSD. However, they experience higher rates of chronic kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), diabetes, glaucoma, hypertension, ischemic heart disease, lung cancer, osteoarthritis/rheumatoid arthritis, anxiety disorder, and high cholesterol. They are more likely to engage in the health promotion step of having a regular doctor. Community resources to support healthy aging include a COA, one community health center, two assisted living facilities, two home health agencies, one public library, 28 primary care providers, and one skilled nursing facility.

POPULATION CHARACTERISTICS	Significantly different than state rate	Community estimate	State estimate
Total population (all ages)		31,089	6,984,205
Population 60 years or older as % of total population		28.0%	23.8%

NOTES

TECHNICAL NOTES

*For more information on data sources, measures, and methodology used in the 2025 Massachusetts Healthy Aging Data Report see our technical documentation at (healthyagingdatareports.org). For most indicators, the community and state values are estimates derived from sample data. Thus, it is possible that some of the differences between state and community estimates may be due to chance associated with population sampling. We use the terms “Better” and “Worse” to highlight differences between community and state estimates that we are confident are not due to chance. We balance two goals. First, we aim to report data at very local levels because we believe change is often locally driven. Second, we vowed to protect the privacy of the people providing the information reported. Thus, given the constraints of the data analyzed, we used a hierarchical approach to reporting.

Data Sources:
